

Calvin Ping

(512) 618-2814 | calvinvping@gmail.com | github.com/CalvinPing | linkedin.com/in/calvinping2005 | Austin, TX

Education

The University of Texas at Austin

Expected May 2027

B.S. Computer Science; Minor in Statistics and Data Science | GPA: 3.25/4.0

Austin, TX

Coursework: Software Engineering, Artificial Intelligence, Algorithms, Data Structures, Machine Learning

Technical Skills

Languages: Python, Java, C/C++, JavaScript, TypeScript, SQL, R

Frameworks/Tools: React, Next.js, Flask, Node.js, SQLAlchemy, Tailwind CSS, Cloudflare Workers, Docker, AWS, Git, D3.js

Databases/Testing: PostgreSQL, Supabase, MySQL, PyTest, JUnit, Selenium

Experience

Outamation (via Extern)

Jun. 2025 – Aug. 2025

AI / Data Engineering Extern

Dallas, TX

- Built a Python/OCR document pipeline to extract structured data from PDFs, reducing manual processing time by 24%.
- Implemented LLM-powered NLP workflows for information extraction and classification, improving document analysis speed and accuracy by 20%.
- Engineered data-cleaning and transformation pipelines and collaborated with a cross-functional team to deliver a production-style prototype.

Austin Central Realty

Jun. 2020 – May 2025

Real Estate Data & Technology Assistant

Austin, TX

- Analyzed property and market data in Excel to identify pricing trends and support data-driven listing strategies.
- Automated data organization workflows with formulas and scripts, reducing manual effort by 25% while improving consistency.
- Built dashboards tracking 40+ property listings and maintained structured client and listing datasets for operational reporting.

Projects

Austin Central Realty | *Next.js, TypeScript, Supabase, PostgreSQL*

Aug. 2026 – Present

- Building a full-stack real estate brokerage site with live listings, agent/team pages, and a syndicated market news feed, backed by a Supabase/PostgreSQL database.
- Built a sync service that pulls active listings from the SimplyRETS MLS API, diffs them against stored records, and upserts public-safe projections while preserving price/status history.
- Added JSON-LD structured data to listing pages to improve SEO and search-result eligibility for individual property listings.

RoleRadar | *Cloudflare Workers, React, TypeScript, Vite, Tailwind CSS*

Jul. 2026

- Built a full-stack job board that aggregates live postings from 150+ companies' ATS APIs (Greenhouse, Lever, Ashby) plus public aggregators, auto-refreshed on a Cloudflare Cron Trigger.
- Designed a sharded refresh pipeline to operate within Cloudflare Workers' free-tier CPU/subrequest limits, cutting per-invocation compute via regex consolidation and round-robin shard balancing.
- Built a classification and field-extraction system to filter postings to genuine SWE roles, surfacing verified salary data on roughly 49% of postings and structured employment-type/seniority fields only from confirmed source data.

FluentPDF | *Next.js, TypeScript, Tailwind CSS, pdf-lib, pdf.js*

Jul. 2026

- Built a full-stack, all-in-one PDF toolkit (merge, split, edit, fill, password-protect) that runs entirely client-side, with no file uploads, accounts, or server processing.
- Engineered a Web Worker-based processing pipeline using pdf-lib/pdf.js via Comlink to keep the UI responsive, and packaged the app as an installable, offline-capable PWA.
- Implemented six tools (merge, split, edit, form fields, password protect/remove, images-to-PDF) with auto-detected fillable form fields and drag-and-drop file handling.

Connected Horizons | *React, Flask, SQLAlchemy, D3.js, AWS*

Sep. 2025 – Dec. 2025

- Built a full-stack platform for exploring broadband access disparities across underserved communities using geographic and demographic data.
- Designed RESTful Flask/SQLAlchemy APIs and data pipelines to aggregate, clean, and serve broadband datasets from multiple sources.
